CUSTOMER DEMO
Deployed prototype view

Data workflows: old architecture vs. new

Named services, connected data flows and a clear human decision point

OLD | Separate tools and manual hand-offs

Source exports + remote desktop
Report files delivered to a shared server

↓

Microsoft Excel
Manual file cleanup and layout changes

↓

eOne SmartConnect + SQL Server
Field mappings and pre-staging imports

↓

Microsoft SQL Server
COGS_STAGING: stored procedures
and module-specific validation scripts

↓

Dynamics GP SmartLists + Jira + Word
Review failures, track actions and
assemble the integrity report

↓

SmartConnect → Cogsdale CSM
Load through CSM business procedures
on Microsoft Dynamics GP / SQL Server

New batch: repeat preparation, checks and review

NEW | Microsoft Fabric + Azure AI Foundry

Microsoft Fabric Data Factory
Prepare pipeline orchestrates file processing, quality checks and AI assistance

Microsoft Entra ID: service authentication is in use; approval authorisation is a production extension.

OneLake · Fabric Lakehouse
Source files by batch; originals preserved
Files are supplied by a person in the prototype

files

Microsoft Fabric Notebooks
Python reshapes supported report layouts
Prepared rows retain source-file references

prepared rows

OneLake
Automatically mirrored
SQL tables for reporting

mirror

Fabric SQL Database
Prepared data + five example rules
Record status, issues and load log
SQL checks determine pass / hold

issues

Azure AI Foundry
Regional gpt-4.1-mini
Grouped codes + counts
Personal-data check first

suggestions

Direct Lake

Microsoft Power BI
Direct Lake
Counts, issues and totals

review

Human review + decision
Review results and AI suggestions
A person chooses whether to load

AI advises only
No automatic fixes,
approval or release

required approver-name entry
(not verified approval)

Fabric Data Factory
Person-started load pipeline
Calls SQL procedure; loads passing rows

load

Demo destination
Stand-in tables within
the Fabric SQL database

Held rows stay held.
AI does not override SQL checks.

Next batch reuses the same preparation pipeline; source owners make corrections.

PRODUCTION EXTENSIONS | Not included in this MVP

Microsoft Entra ID-authorised approvals · Power Automate / Microsoft Teams · On-premises data gateway → real CSM interface

Microsoft Purview policies · Full business rules and mappings · Automated source connections · Monitoring and recovery controls

Prototype scope: 3 extracts, 5 simplified checks and a stand-in destination. Not a complete migration or production approval system.
Solid arrows show data or review flow. Blue band shows orchestration. Dashed zone shows proposed production additions.
